

I am

The farmer who is trying to cultivate the crops for huge profit and very control in using fertilizer on he crops.

I'm trying to

Use the recent technologies to avoid disease in crops and trying increase the quantity and quality of crops.

But

I am unaware of the existing technology that can help me lot to predict a disease and I don' know to use the correct fertilizer for disease.

Because

I don't want to spoil the sol quality and crops quality.

Which makes me feel

I'm not capable of cultivating the crops and maintaining the quality of land and producing good quality of crops.
